font

Font 007

"It's good to introduce non-human forces, be they mechanical or natural, in order to invigorate or question existing creative processes.

ROB MEEK PAGE 28

I need restrictions to be creative; it's when I have restrictions that I can perform my 'art'.

JEAN FRANÇOIS PORCHEZ PAGE 9

The mainstream accessibility of the computer has publicly lowered the accepted general standards and value of good design, while professionally it has considerably magnified the designer's abilities. When you have tensions like these at play in any field, the result is usually mixed, but a little more good than bad.

ALEJANDRO PAUL PAGE 10"

Ideas can be works of art; they are in a chain of development that may eventually find some form. All ideas need not be made physical.

SOL LEWITT PAGE 14
Rule Makers / Rule Breakers

AFTER A LONG DAY of scanning web pages and deleting junk email, I might sit back and soak in the latest entertainment news from Hollywood or reflect on national opinion with the chatter of pundits and their eternal polls that never seem to get the story right. I like to think that it's my obligation to the media industrial complex to absorb as much information as possible or risk, like excess carbon dioxide in the atmosphere, a dangerous buildup of ones and zeros.

Things sure have changed in the last decade. When I think about the trajectory of our contemporary society, with all the tools and applications we use to publish, move, and manage information, I'm immediately reminded of Henry David Thoreau. I can picture him sitting outside his small cabin, quietly meditating on the breakneck speed of social and economic progress as the last rays of the day sparkle across Walden Pond. Like us, Thoreau was experiencing a profound shift. His, defined by rapid industrial expansion and a final push across the frontier; ours, by the release of the latest smart phone or praise for the next big viral video. But unlike Thoreau, who saw a need to retreat from the rules and systems that were quickly reshaping his world, we've embraced ours as solutions to organize physical and electronic space or to fulfill a personal identity within the gathering storm of the data we face every day.

Where Thoreau wasn't impressed with change, writing that, "There is an incessant flow of novelty into the world and yet we tolerate incredible dullness," curator and art critic Glen Helfand finds inspiration. Recognizing ours as an age of convergence, Helfand focuses this issue of *Font* on the work of a wide cross section of artists and designers who are "making the rules" by channeling that incessant flow through filters and toward the creation of generative art. He convinces us that processing information is not only a reflection of our time but a celebratory act that can result in beautiful thought-provoking images and objects. We also focus on six additional projects that feature graphic designers and typographers who are "breaking the rules" by using generative concepts to map ideas, from individual letters to complex narratives. Finally, we toot our own horn for FontStruct, a new online portal for building and sharing fonts that's been getting plenty of blog buzz.

If it's true that everything has its proper place, then we can rest assured that Thoreau found his at Walden and those extra ones and zeros (and all that they represent) have found a comfortable home in *Font* magazine. To get started, here are a few simple rules: read, share, and recycle.

THROUGHOUT THE 1990S, Erik Spiekermann made several attempts at designing a companion for his original **FF Meta**, arguably one of the most ubiquitous fonts of the past two decades. Colleagues had often asked which serif face would best fit with Meta, ***and after years of recommending a variety of suitable faces,*** Spiekermann realized that he should just make his own serif companion.

INTRODUCING ···→

FF Meta Headline Compressed
FF Meta Headline Condensed

FF Meta Hairline
FF Meta Condensed *& Italic*
FF Meta Correspondence *& Italic*
FF Meta *& Italic*
FF Meta Serif *& Italic*

Extended

Meta tąme måté ṭɛám MĔĀṬ

a 4 @ ¶ f ▶ € ů ···: 5/8 ſs Q ű

*"The whole Meta system is supposed to solve **separate typographic problems** while keeping A FAMILY RESEMBLANCE. This is not a family of identical triplets, but **sisters and brothers** or even **nieces and nephews**."*

ERIK SPIEKERMANN

The OpenType version of **FF Meta Serif** offers book, **medium, bold,** and **black** weights, each including *italics*, SMALL CAPS, alternate numeral styles – proportional, tabular, lining, oldstyle – extra ligatures, case-sensitive punctuation, and a range of arrows and other symbols. *(The Pro version also supports Eastern European languages.)*

While the serif design can stand on its own in a wide range of applications, the extra benefit is its close relationship to the original **FF Meta**, its sans serif sister. *The two families can be mixed in the same line, **and one can be used to accentuate the other.*** Using both on the same page adds VARIETY *AND MEANING* TO A TEXT.

Built With Bricks
S o, what exactly is this FontStruct thing?

FontStruct is a free online platform for creating and sharing modular grid-based fonts which FontShop International launched in early April 2008.

Where did the idea come from?

In many ways, the starting point was really the Meek FM *(also see page 28)*, which was my first contribution to the world of grid-based design tools, and initially appeared in 2000. I was relatively new to the world of graphic design, having just switched from the programming to the design department at the agency where I was working. I was completely ignorant of the world of typography, but soon became fascinated by it, and wanted to design a font; a grid-based modular font seemed like an easy way in.

How did the project come about?

I started laying out shapes in Freehand. My lack of experience led to a lot of hesitancy in making creative choices. I kept changing my mind about the forms I wanted to use – should they be spaced out or flush next to each other, that kind of thing. At some point, I moved from Freehand to Flash so that I could automate changes, and gradually built a tool to cater to my indecision. That's where the Meek FM came from.

There were also a number of comparable projects under development at about the same time – evidence of a broader interest in grid-based design tools.

Really? Who was behind them?

Michael Gianfreda, Lorenz "Lopetz" Gianfreda, and Kaspar Lüthi at Büro Destruct were working on BDD (Büro Destruct Designer) between 1999 and 2003. A tribute to Swiss design of the 1960s, it's certainly a classic of the genre, encouraging the user to make a virtue of limitation. Strict adherence to a grid, a simple point and click interface, and a selection of simple geometric shapes to choose from were its key ingredients. The ability to export creations in a usable format was also an important feature.

Another inspirational piece of Swiss work was Lineto's Lego Font Creator (circa 1999), by Urs Lehni, Rafael Koch, and Jürg Lehni. This was more explicitly a type builder, but was again based on principles of grid-constrained construction using a palette of predefined shapes.

Fast-forward to 2005, and there was BitFontMaker from Japan. (I actually only became aware of this after I first pitched FontStruct to FontShop in May 2006.) It shares many characteristics with FontStruct: one hundred percent online; a simple intuitive interface for grid-based font creation; a gallery; and downloadable TrueType fonts.

I think FontStruct offers a lot more than BitFontMaker, but it's very well executed nonetheless.

So there's definitely a clear precedent for grid-based design tools, and a tradition of designers trying to create their own more specialized tools.

Perhaps it's also partly a reaction to the complex interfaces offered by the likes of Fontlab and Adobe.

Yes, it's good to have – or at least imagine – alternatives, whether they are more specialized tools or simply tools which defamiliarize the creative process.

How does the Meek FM differ from FontStruct?

The Meek FM is about tweaking an existing design; I wanted to do something that was about constructing grid-based typefaces from scratch. Also the Meek FM, and, to a certain extent, the other projects I've referenced, are more toys than tools. There's an emphasis on playfulness rather than earnest practical production. The output is of limited quality and practical value. I wanted to make something that could really stand up as a useful tool to enable modular type design.

I saw the opportunity, particularly when approaching FontShop with the idea, to create an online font-sharing community around a modular font editor; a kind of mini-Flickr for fonts, if you will. Font design really lends itself to the online environment. The file sizes are small, and the relatively simple systematic nature of the data make the creation of an online font design tool much more straightforward than an image, video, or music editor.

I'd wanted to pursue the project for quite some time and had initially imagined an offline application. However, as Web 2.0 apps continued to get more sophisticated and powerful, I felt a sudden panic that someone else was bound to do this and realized that I needed a partner with clout, with typographic expertise...

Enter FontShop.

Yes. It's been a great match as far as I'm concerned. I've effectively been paid for what I wanted to do in my spare time anyway, with no compromising of the original idea. FontShop had an immediate understanding of the potential for an online font-building and sharing platform. I think it's quite brave and forward-thinking for a font vendor to give people the chance to make their own fonts for free.

FontShop's vision for FontStruct really focused on developing a community site rather than a pure font editor. Sharing, rating, and discussion capabilities are all right there in the browser.

It feels unique having the creation and editing together with the community features. I don't think there are many online applications which integrate both. It's as if people were actually recording music in MySpace or taking pictures in Flickr. There's a very close relationship between the creation and exchange with others.

Absolutely. Ask even the most seasoned expert and they'll more than likely say they're still learning. That's probably what keeps so many people so interested in drawing and redrawing the alphabet over and over again. You're always learning and your context is always changing.

Indeed. My main goal when creating the interface was to keep it accessible for beginners but also powerful enough to interest seasoned typographers. I wanted to remove everything that would inhibit a novice. You start with a very simple metaphor – drawing on a grid of squared graph paper – and you don't have to bother with any specialist terminology or concepts. More advanced features are available from menus and with keyboard shortcuts.

The first two months have borne out your vision and FontShop's foresight. FontStruct has been unexpectedly popular, resulting in some very high quality work and tremendous diversity. Hey, we even got a mention in *The New York Times*! So, what's next?

We have a lot of ideas, many of them from the user community, and we're adding features steadily. The highest priority at the moment is fixing minor bugs and annoyances, and adding some control over horizontal metrics so people can define how their letters are spaced. We also want to bolster the community features, such as incorporating proper user homepages.

Are you concerned that free FontStructions devalue commercial type and might harm FontShop's business?

Quite the opposite, actually. FontStruct is fun and easy partly because it is very limited. I think it nurtures not only the pleasures of type design but also an understanding of how much work is involved in making a font and why 'real' fonts cost money. FontStructions have too many limitations (everything has to be based on a grid, there's no kerning, no hinting, no OpenType features, and so forth) to be any real threat to FontShop's retail sales. ◻▪

FONTS USED

FF Balance™ and **FF Scribble™**

FF Balance marked the beginning of
FontFont designer Evert Bloemsma's
decade-long exploration into readability.
Its peculiar horizontal stress and four
weights of equal widths put it in a class
of its own. FF Scribble is inspired by
the era of pre-digital composition and
an ironic play on the design truth that
sketches are often more pleasing than
the computer-processed final.

FONTS USED

FF Airport™ and **FF Tisa™**

FF Airport is the Lineto studio's tribute
to the charm of LCD displays, freight
waybills, and boarding passes. The
FF Gateway™ fonts are based on the
electronic display systems at Tegel and
Schönefeld airports in Berlin. For FF Tisa,
Slovenian designer Mitja Miklavcic set
out to create a more subtle and dynamic
slab serif. He succeeded, earning the
Type Directors Club's Certificate of
Excellence in Type Design for 2007.

BUILT WITH BRICKS

FONT USED

FF Nuvo™

During a stay in Paris, the elegance
and extravagance of French magazines
inspired Siegfried Rückel to create
a typeface of his own. The result isn't
nearly as ostentatious as his muses,
yet is sublimely usable for editorial
design in its own right. FF Nuvo has
a soft calligraphic touch with a set of
alternates that offer stylistic versatility.
